

Create a Scientist picture / description

Think about what a scientist looks like to you. You will take that image and draw it on a piece of notebook paper. The drawing must include a picture of the scientist doing his / her job. Once the drawing is complete, you will write a paragraph (6-7 sentences or more) describing your scientist. Their name, what job they do, where they work, what they are working on, their background, what they hope to achieve, etc. If you choose to do so, you may color your drawing as well. Feel free to ask me any more questions I may not have covered.
